GiveLife: what is broken

Audit snapshot | 10 November 2026, 15:36 PKT

The live site is not certified fixed. Fixes below are in the review branch. A new main-branch update is being checked separately; its confirmed failures are listed first.

Still open / newly found

Where	What is wrong	Status
Donors > Donated	The new Thank donors button is squeezed to 48px and its label overflows at 280/320px.	Confirmed; fix pending
Thank donors modal	At 280x480 and 320x480, the footer covers pace controls and Preview / recipients, even after scrolling.	Confirmed; fix pending
Live side view	This chat has no Desktop opener and its preview relay is unavailable.	Environment blocker

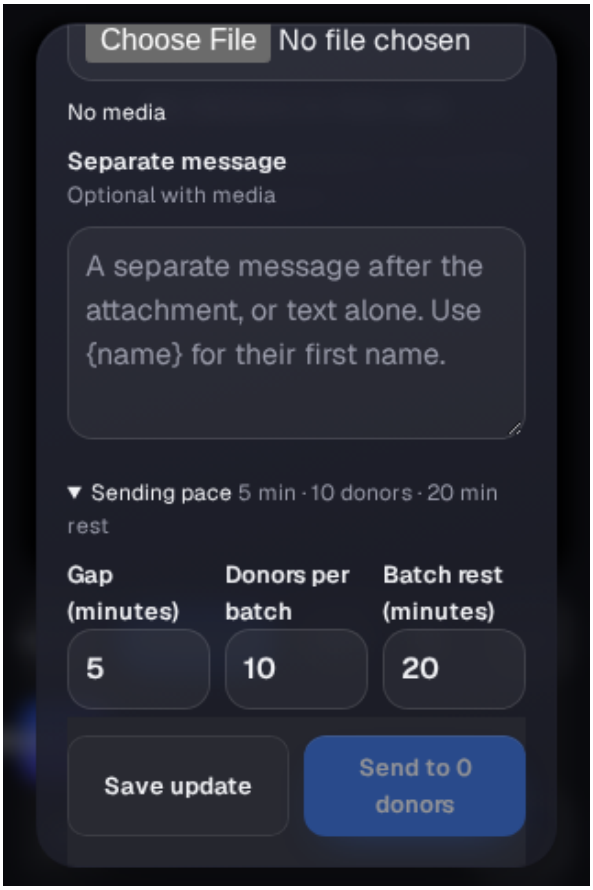

Confirmed problems with fixes in PR #191

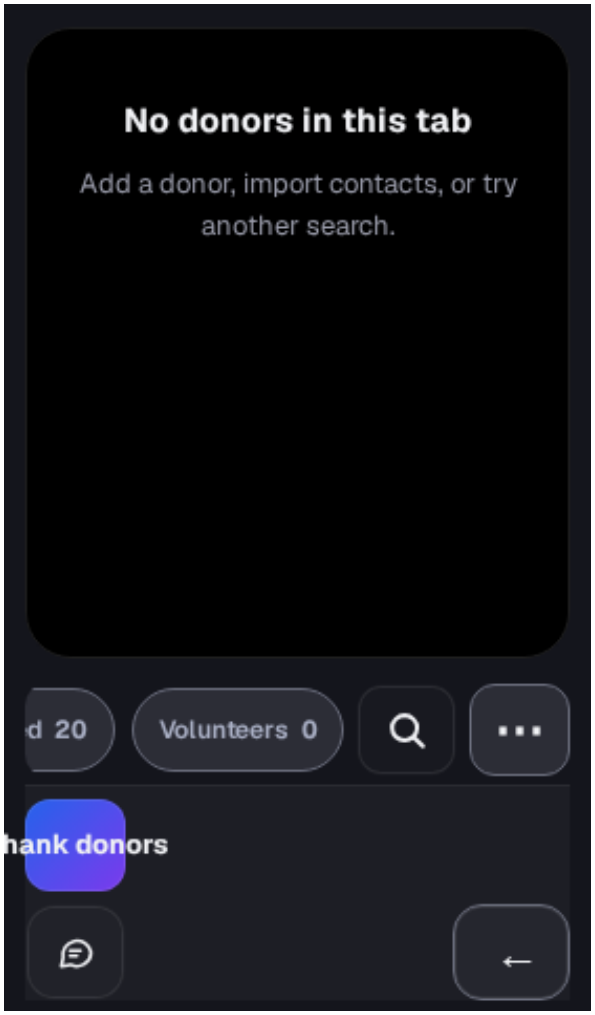

Area	Problem found
Notes	Formatting tools overflow on narrow phones; a CSS override can leave the editor workspace visible after Lock.
Preview / three dots	The menu extends beyond the phone viewport and clips actions.
Preview, landscape	Next / Regenerate can sit behind the bottom action dock.
Donor row menu	Row containment clips opened menus; short landscape screens make options unreachable.
Follow-up	DM-only navigation and actions overlap the Follow-up content.
Reply	The action footer can cover Add on short screens.
Report + Reply	Report restores after a delay and can cover a dialog the user has just opened.
Search / labels	Search covers donor tabs; Back and the desktop amount label can be clipped.

Status: these fixes passed on the earlier reviewed base. The latest merge is being tested; it is not yet approved as complete. No production deployment was performed.

Evidence and testing limits

Latest merged-code failures | synthetic test records

Left: Thank donors pace controls on a short phone. Right: the Donated screen, where the Thank donors label is squeezed.

What has actually been verified

Before the newest main update, all 14 control tests passed: 41 screen states at 13 viewport sizes (533 state checks), plus a timed Report/Reply regression. All 10 Report layout tests also passed. These results apply to main base 5aaa1a1 plus the review fixes.

Main then added the Thank donors feature and new desktop DM actions (through ec8da4b). Its integrated audit is in progress and has found the two new mobile issues above. It must not be described as all green.

The checks use Microsoft Playwright / Chromium and fake transport. No real WhatsApp messages were sent. Every possible width, every business outcome, physical-phone keyboards and other browsers have not been exhaustively verified.
