Contents

01	What this app does	overview
02	The top bar	Group/DM, Message preview, case, amount left, WhatsApp, Donors
03	Writing and sending the group message	Edit, New, send
04	Sending a direct message (DM)	one person at a time
05	Auto — let the app post by itself	the Auto switch
06	Talking to the assistant	type instead of click
07	The Donors directory	tabs, search, add
08	One donor at a time	DM, status, amount, the ⋯ menu
09	Sending to many donors at once	bulk paste, Important, All
10	The Messages library	saved caption versions
11	Volunteers	people who help share the case
12	WhatsApp connection & the poster	staying linked
13	Settings worth knowing	theme, AI, DMs, WhatsApp
14	Keyboard shortcuts	for a mouse-free desktop
15	The golden rules	never break these
16	Quick reference	one page to keep open

Not in this guide: the Team screen (assigning and tracking your own tasks) is covered separately. Everything else in the app is here.

01 What this app does

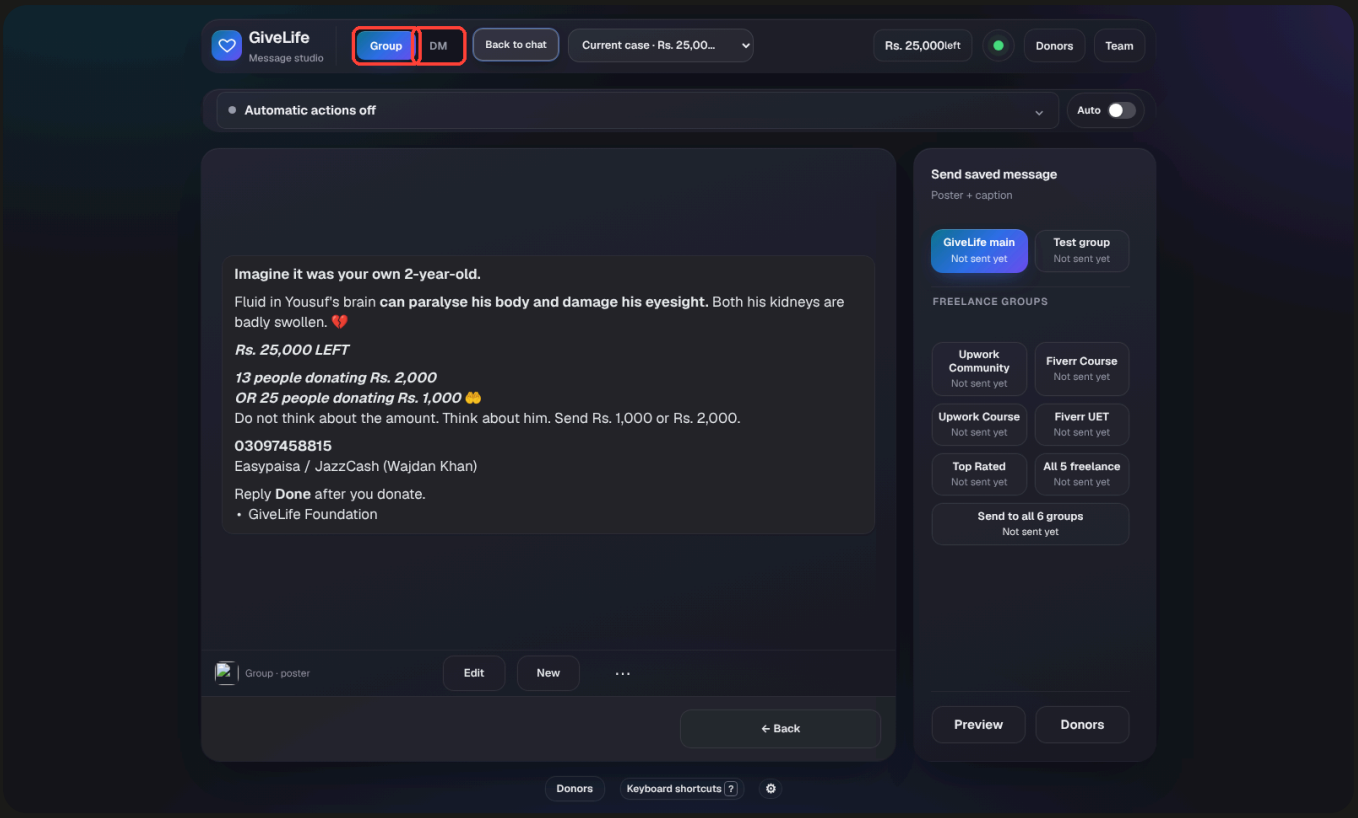

GiveLife Message Studio is where every case message is written, previewed and sent. It keeps one case open at a time — the amount still needed, the group caption, the DM caption and the donor list — and it does the typing for you.

- **It writes the message.** A fresh group or DM caption is ready any time, built from the real amount left and the real case facts — never the same wording twice in a row.
- **It sends it.** To one group, to all groups, to one donor by DM, or to many donors at once.
- **It can send itself, on a schedule.** Turn Auto on and it keeps posting to your groups without you touching anything.
- **It remembers your donors.** Who you've messaged, who has donated, who still needs a nudge.
- **You can talk to it.** Instead of clicking through screens, you can simply type what you want — "25k left", "send to main", "dm important donors" — and it does it.

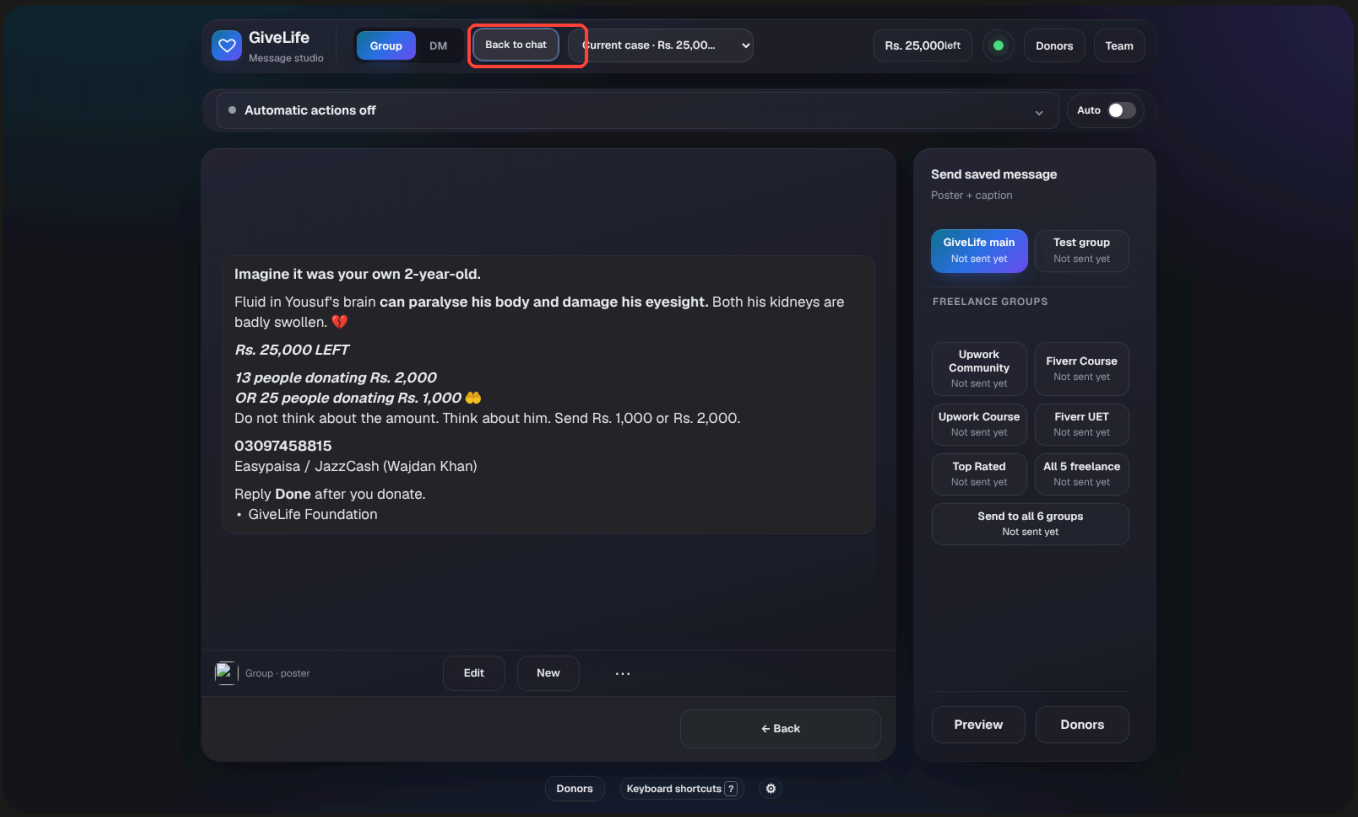

One thing to always remember: everything this app sends goes out as a real WhatsApp message. There is no "undo" on a sent message — read Section 15 before you send your first one.

02 The top bar

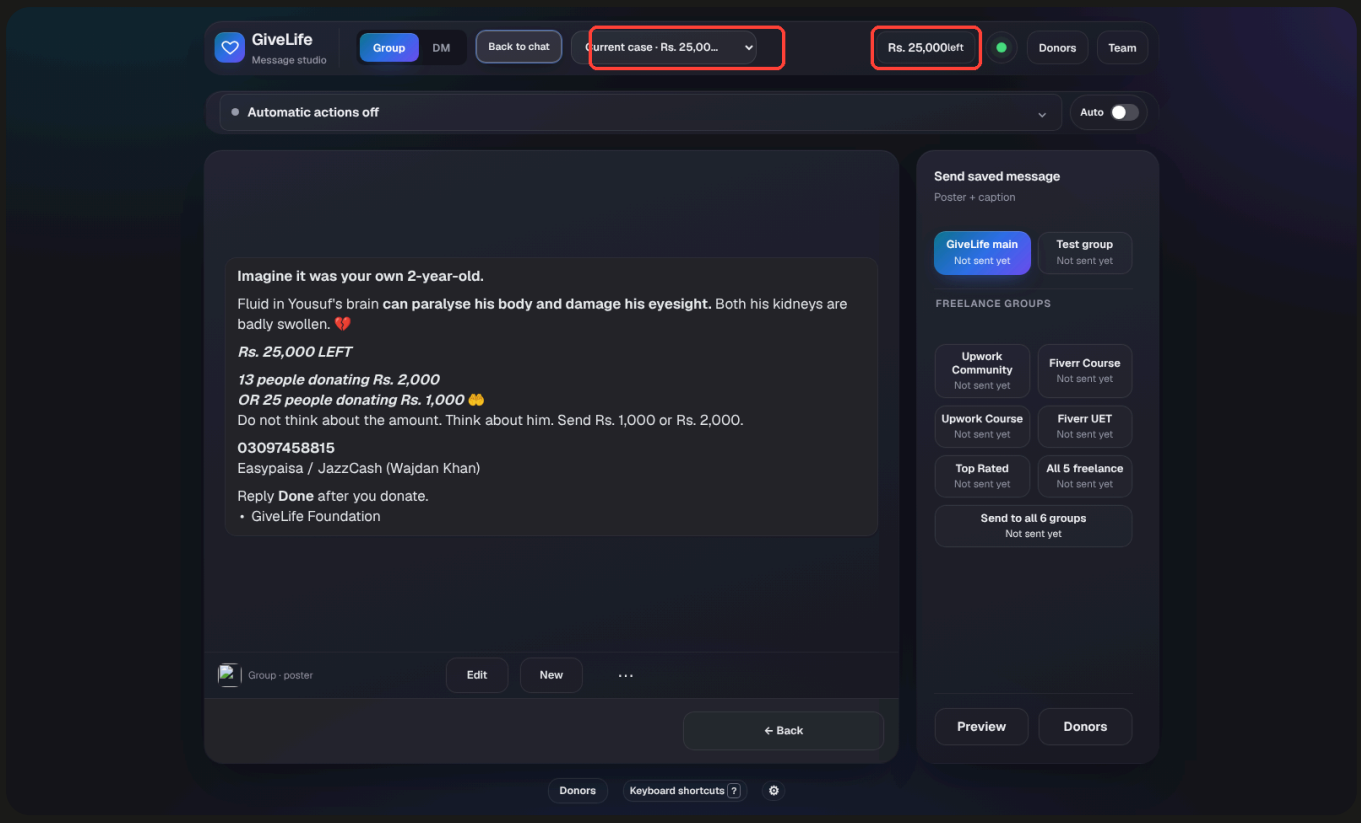

Every screen starts here. These controls are always on screen at the top of the app.

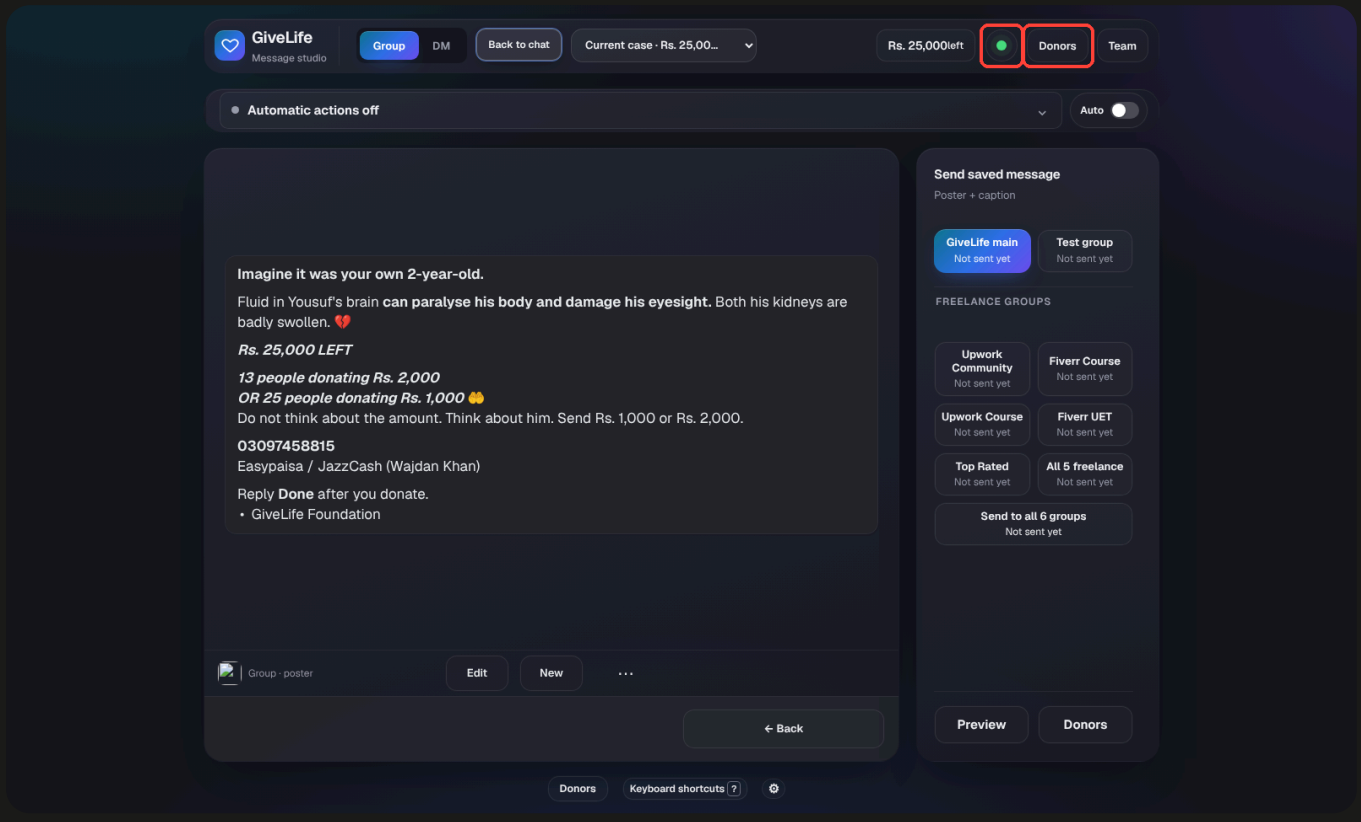

Group / DM switches which message you're looking at. Group is the caption that goes to WhatsApp groups. DM is the private message sent to one person. They are two separate, independently saved captions.

Message preview shows or hides the actual caption on screen. The app opens with it hidden, so you see your conversation and the donor panel first — tap this to read or edit the message that will be sent next. (On a phone this button is called **Show message**.)

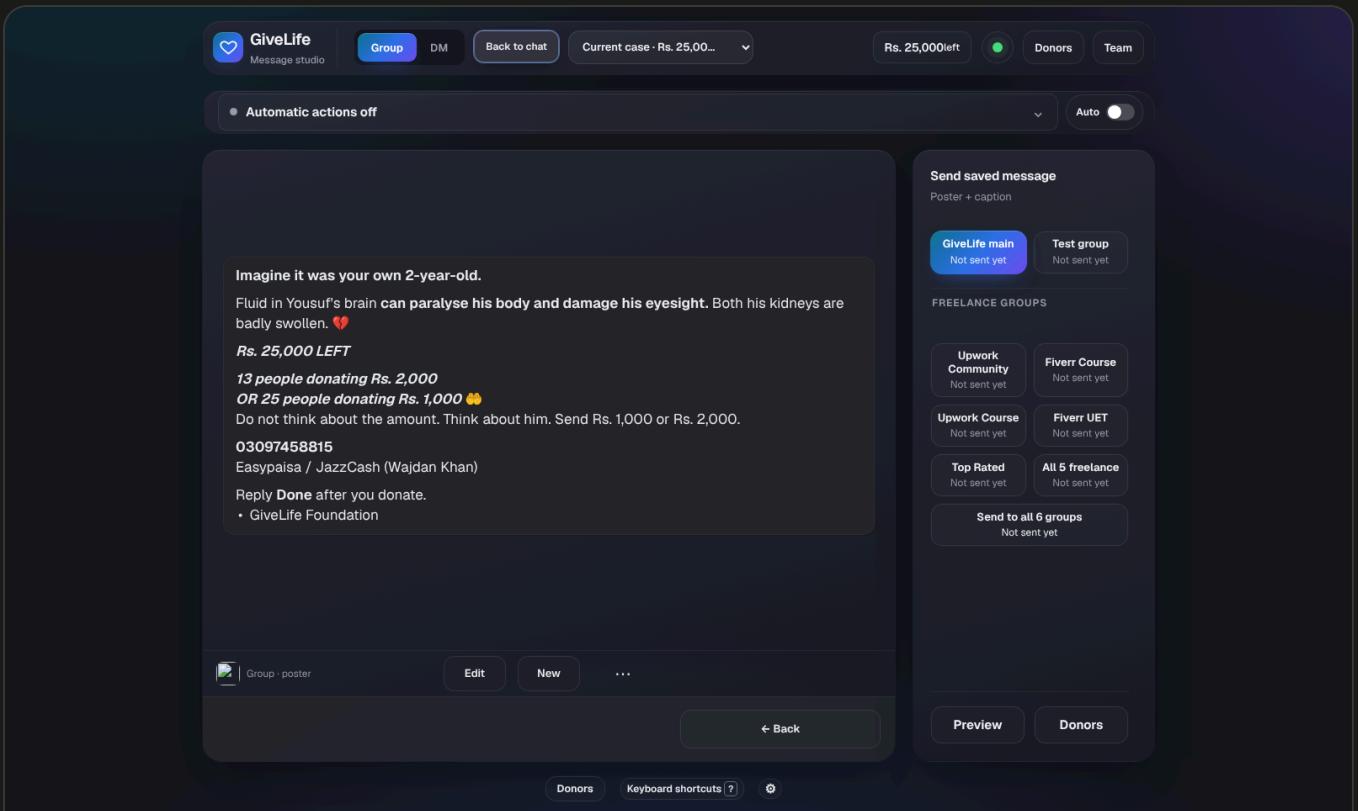

Current case opens a list of saved cases — switch between them, rename the current one, or start a new one from zero. Each case keeps its own amount, captions and donor marks separately.
Rs. … left is the amount still needed for this case. Tap it (or just tell the assistant, e.g. "25k left" or "came 2000") to update it — the group and DM captions reflect the new amount immediately.

The dot shows whether WhatsApp is connected (green) or needs attention (tap it to open the connection screen — see Section 12). **Donors** opens the Donors directory (Section 7) — it's also in the footer at the bottom of the screen and, on desktop, as a shortcut in the bottom corner for one-tap access.

03 Writing and sending the group message

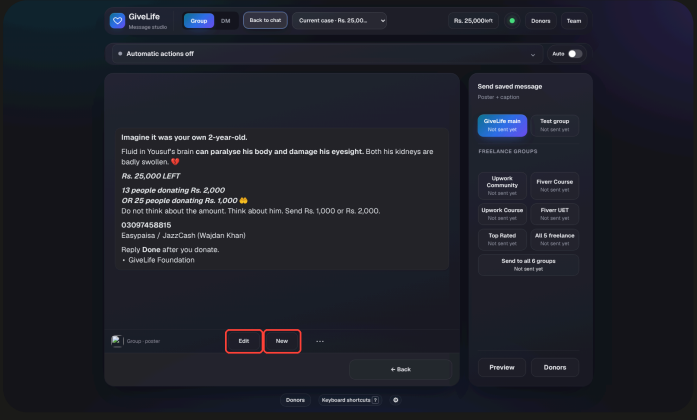

Open **Message preview** to see the caption. This is exactly what will be sent to a group.

The saved group caption, with its poster, and the Edit / New / ··· tools underneath it.

Edit it yourself

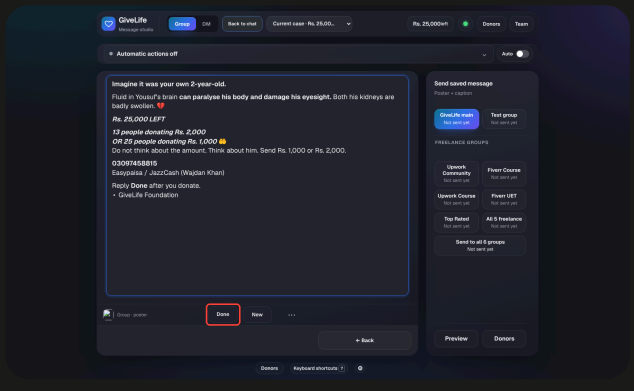

1. Tap **Edit**. The box gets a blue outline and becomes typeable.
2. Change the text. Bold, italic and line breaks are kept exactly as WhatsApp will show them.
3. Tap **Done** (the same button). The new wording is saved immediately — it's what sends next.

Let the app write it

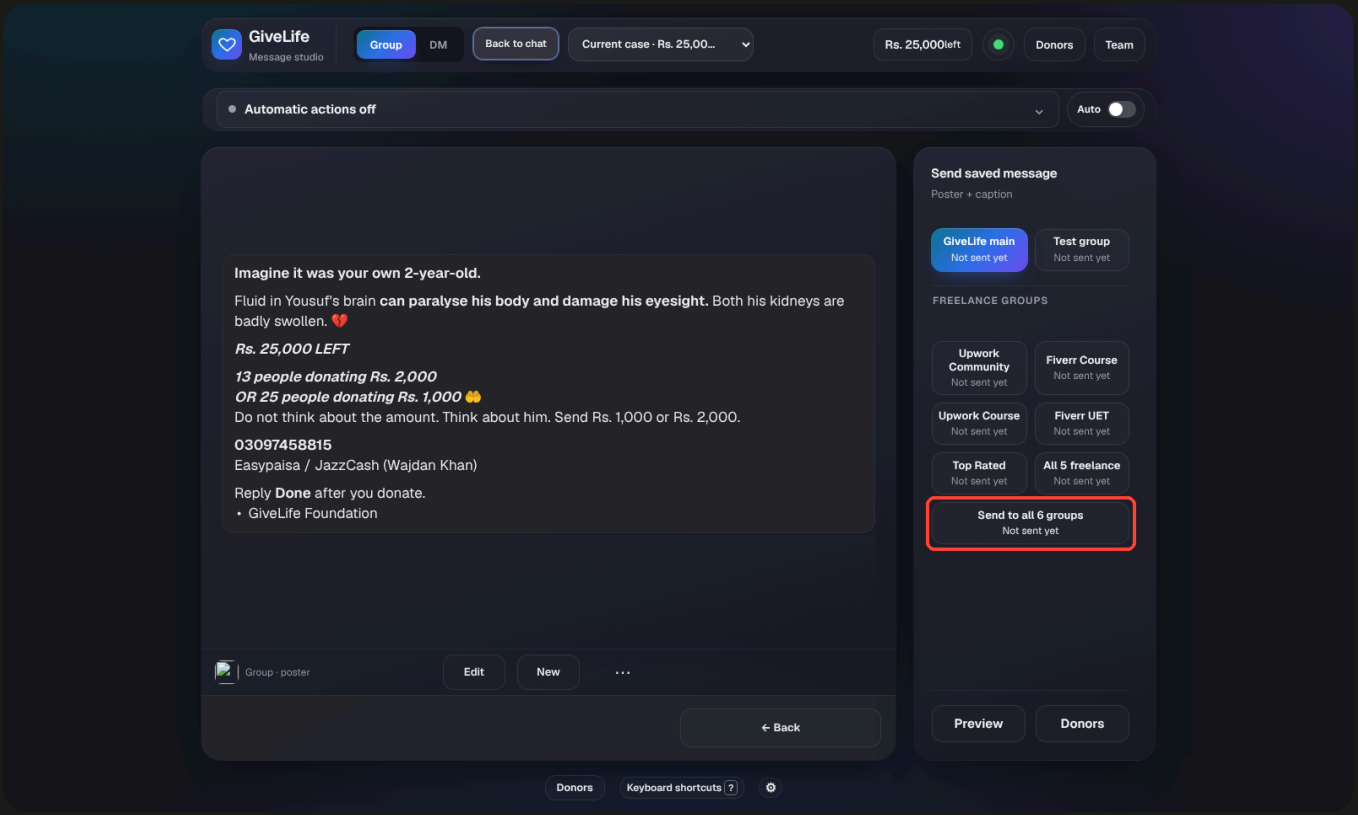

Tap **New** for a different ready-made version of the message — same facts, different wording. Use it any time you don't want to write yourself, or before a repeat send so it doesn't look identical to the last one.

The ··· menu next to New holds **Copy message** (copies the text) and **Hide message** (same as Message preview, closes the view).

Sending it

The panel on the right lists every WhatsApp group this foundation posts to. **Tap a group's name and the app sends the current caption and poster to it, immediately.** There's no separate "confirm" step — only tap a group when the message on screen is the one you want sent.

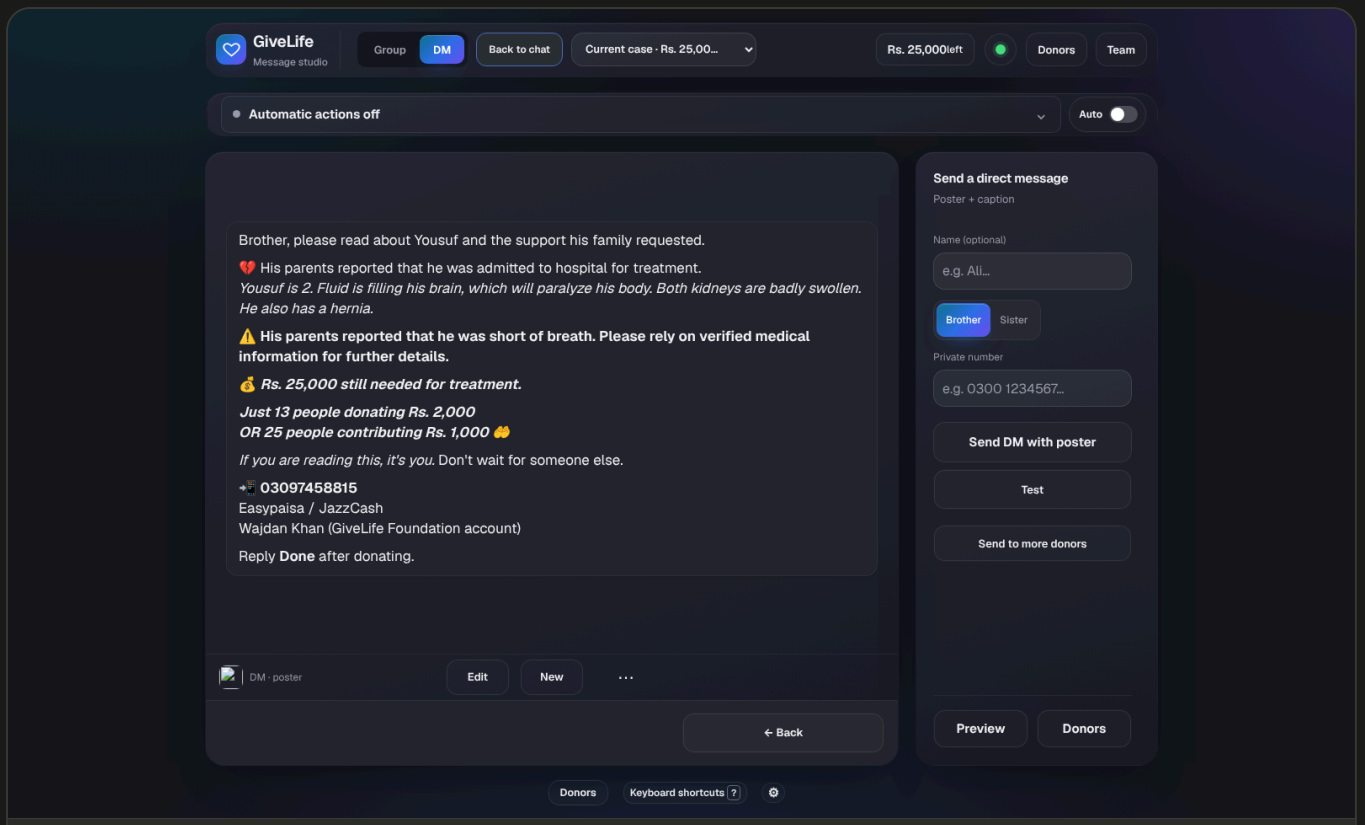

Send to all N groups sends the same message to every group in one go, with a short gap between each so it doesn't look automated. Each tile shows when it was last sent to ("Sent 19 h ago") or **Not sent yet**.

> **Golden rule:** let the app write a fresh message (tap New) before a repeat send. The same wording, sent over and over, is what makes people stop reading. See Section 15.

04 Sending a direct message (DM)

Switch to **DM** at the top. This is a private, one-to-one message — its own caption, written for a single reader rather than a group.

The DM screen: the saved DM caption on the left, the send form on the right.

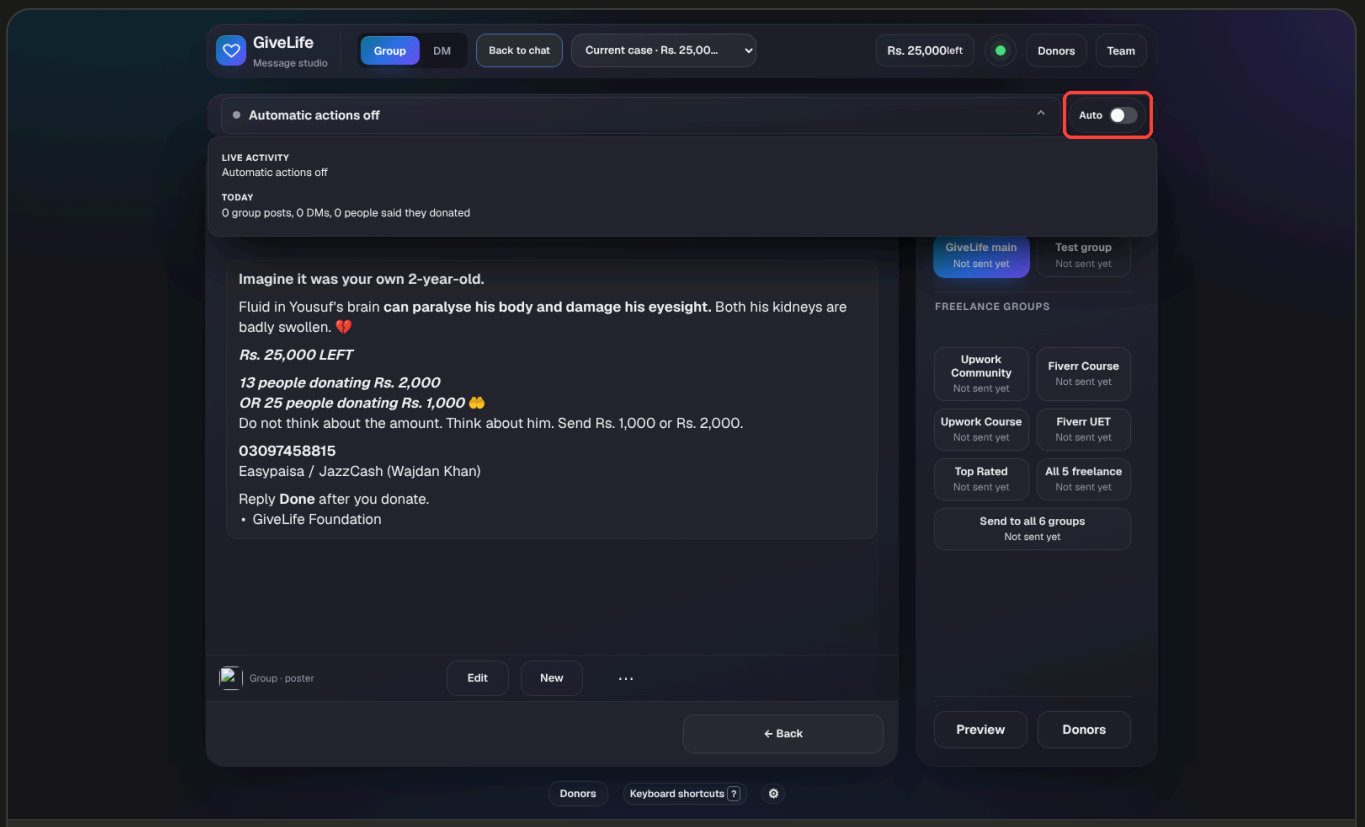

1. **Name (optional).** If you know their name, type it — it's used as the greeting. Leave it empty and the message opens with "Brother" instead.
2. **Brother / Sister.** Pick whichever fits the recipient. Business or unclear names default to Brother.
3. **Private number.** The recipient's WhatsApp number.
4. Tap **Send DM with poster**. It goes out immediately, with the poster image attached, exactly like the group send.

Test sends the same DM to the foundation's own test number first — use it to check how a new caption actually looks on WhatsApp before sending it to a real person. **Send to more donors** opens the same paste-many-numbers box described in Section 9.

> **Tip:** for an existing donor, it's almost always faster to use the Donors directory (Section 8) instead of typing their number here — their name and number are already saved.

05 Auto — let the app post by itself

Below the top bar is the **Automatic actions** bar. Switch **Auto** on and the app starts posting the group message to your WhatsApp groups by itself, on a schedule, with gaps between each post so it reads as a person posting, not a bot.

Tap the bar itself to expand it and see exactly what Auto is doing right now and today.

- While Auto is on, the bar shows what's happening — waiting, sending, or paused — and a short note on what it's doing and why.
- Tap the bar to expand it: it shows live activity, when the next posts are due, and a running total for today (group posts, DMs, and how many people said they'd donated).
- You can still send manually at any time — tapping a group (Section 3) always sends immediately and doesn't wait for Auto.
- Turn Auto **off** any time to stop automatic posting completely. It never sends while off.

If the case is closed, WhatsApp is disconnected, or the account is on hold, Auto will not post even if the switch is on — the bar explains why.

06 Talking to the assistant

The box at the bottom of the screen — `Message GiveLife…` — is a real conversation, not a search box. Type what changed or what you want done, in plain English or Roman Urdu, and the app does it and tells you what it did.

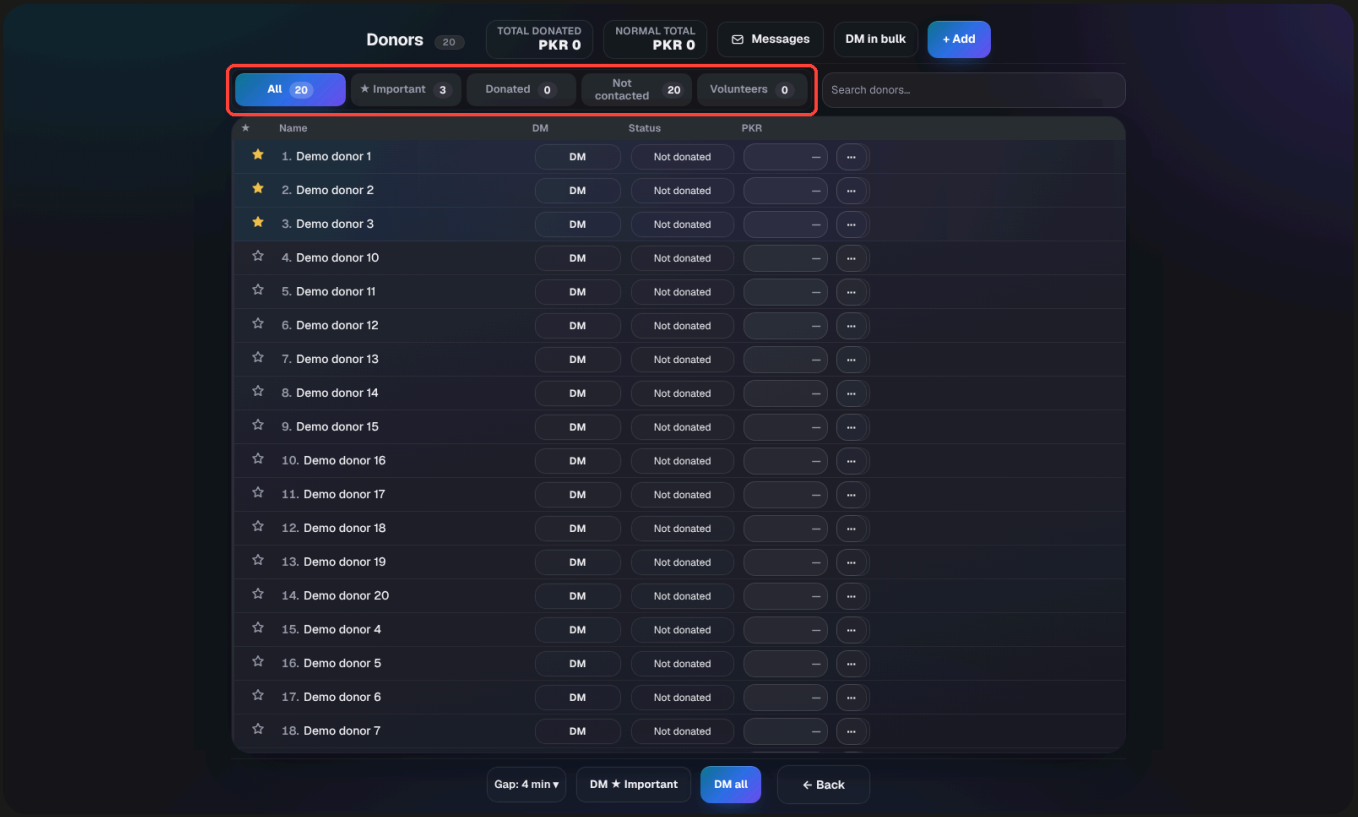

YOU TYPE	WHAT HAPPENS
`25k left` or `34,000 left`	Updates the amount still needed. The captions update to match.
`came 2000`	Records that Rs. 2,000 came in and reduces the amount left.
`send hi to Ali`	Sends exactly those words — not the saved caption — to Ali.
`send to main`	Sends the current group caption to the GiveLife main group.
`send dms` / `dm important`	DMs the Important donor list, using your usual batch size and gap — it remembers your last settings.
`stop` / `ruk` (while DMs are sending)	Pauses the batch and reports how many were sent.
`hold everything`	Stops all sending — posts, DMs, everything — until you say resume.
`give me 3 versions of this` (with a message pasted)	Rewrites the pasted message into several versions and saves them to the Messages library.
`what's scheduled?`	Lists anything queued to send later, with its time.
`cancel schedule 2`	Cancels that queued item.

It only acts on what you actually wrote in your current message — never on old messages, quoted text, or anything a donor sends it. If something is ambiguous (two people could match a name, for example) it asks one short question instead of guessing.

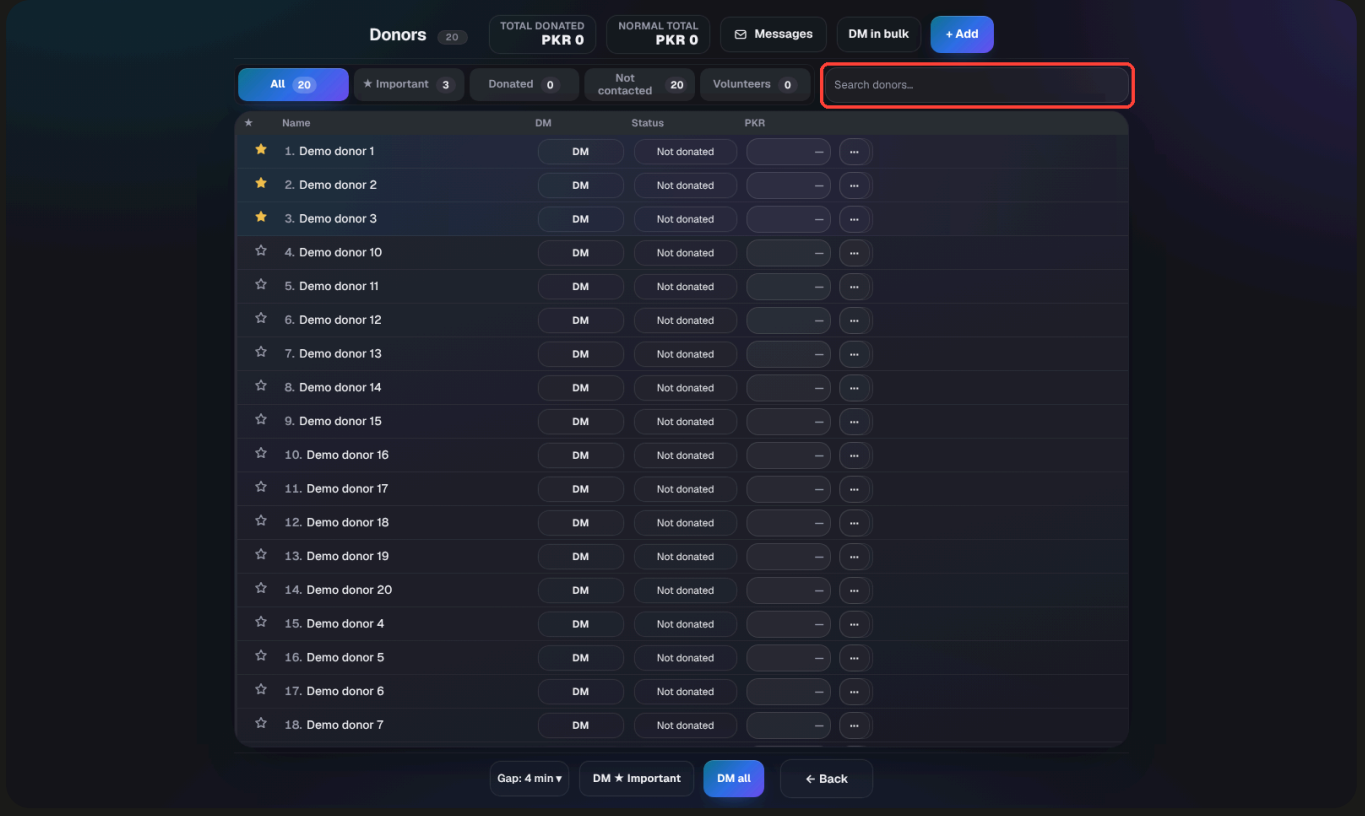

Shortcuts: if you find yourself typing the same multi-step instruction often, say `save shortcut morning run: post in main then dm 10 donors`. After that, sending just the word `morning run` does the whole thing.

07 The Donors directory

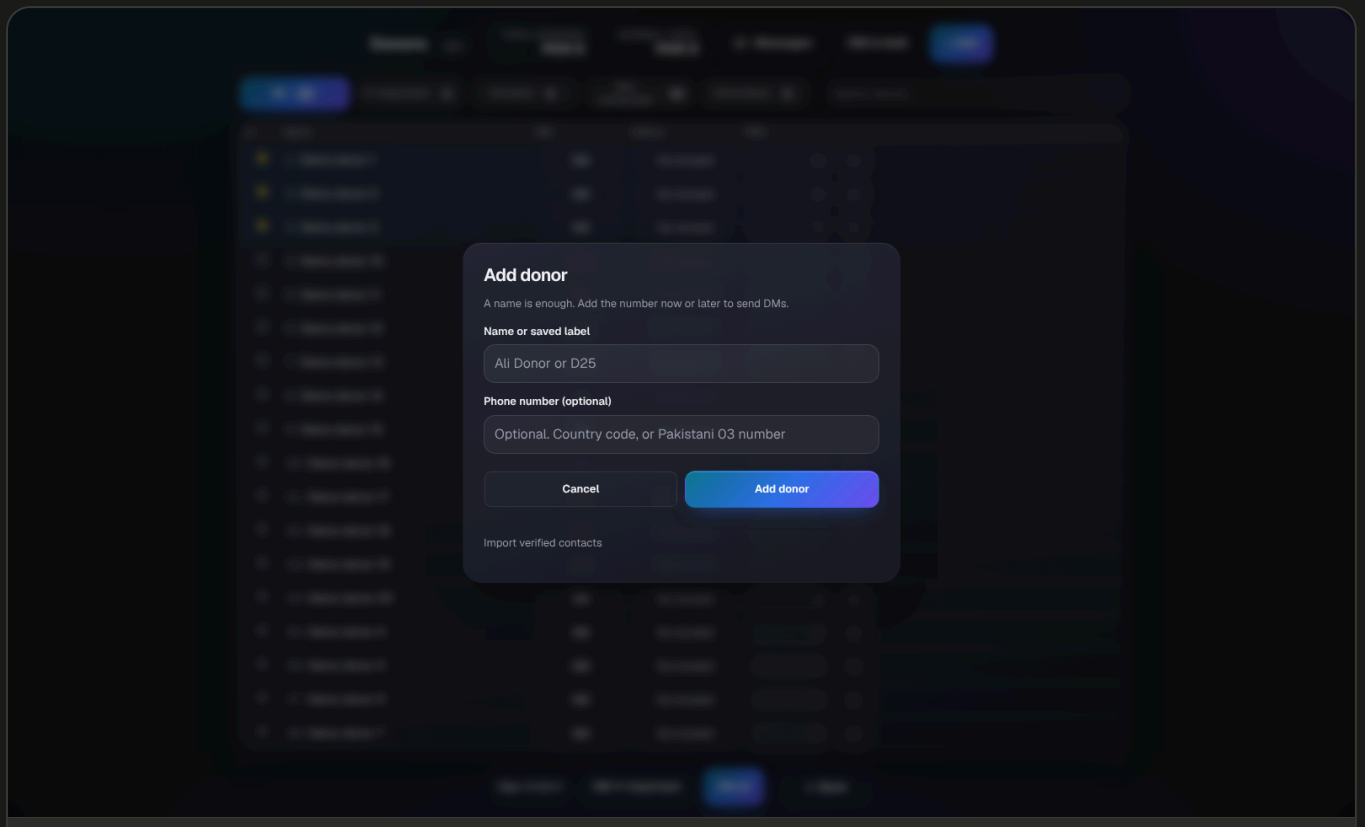

Tap **Donors** (top bar, footer, or the bottom-corner shortcut) to open the full donor list — every person who has been messaged or might be.

TAB	SHOWS
All	Every saved donor.
★ Important	Donors starred for priority sending — tap the star on any row to add or remove it.
Donated	Donors marked as having given.
Not contacted	Donors who have never been DMed.
Volunteers	A separate list — see Section 11.

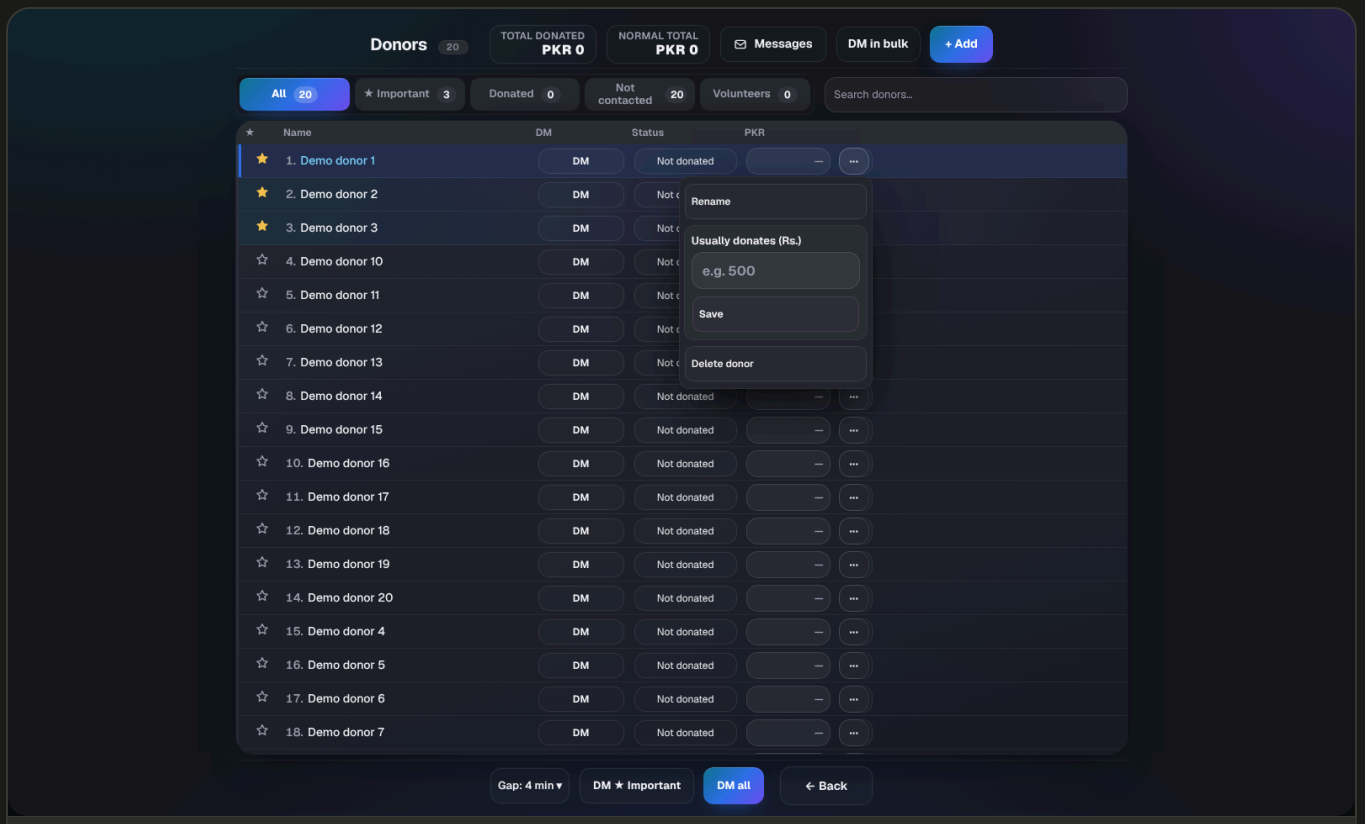

Search filters the list by name as you type. **+ Add** opens a small form for one new donor — a name is enough; the phone number can be added now or later.

Adding a donor: only a name is required. "Import verified contacts" can add several at once from your phone's contacts.

08 One donor at a time

Each row in the donor list has four controls.

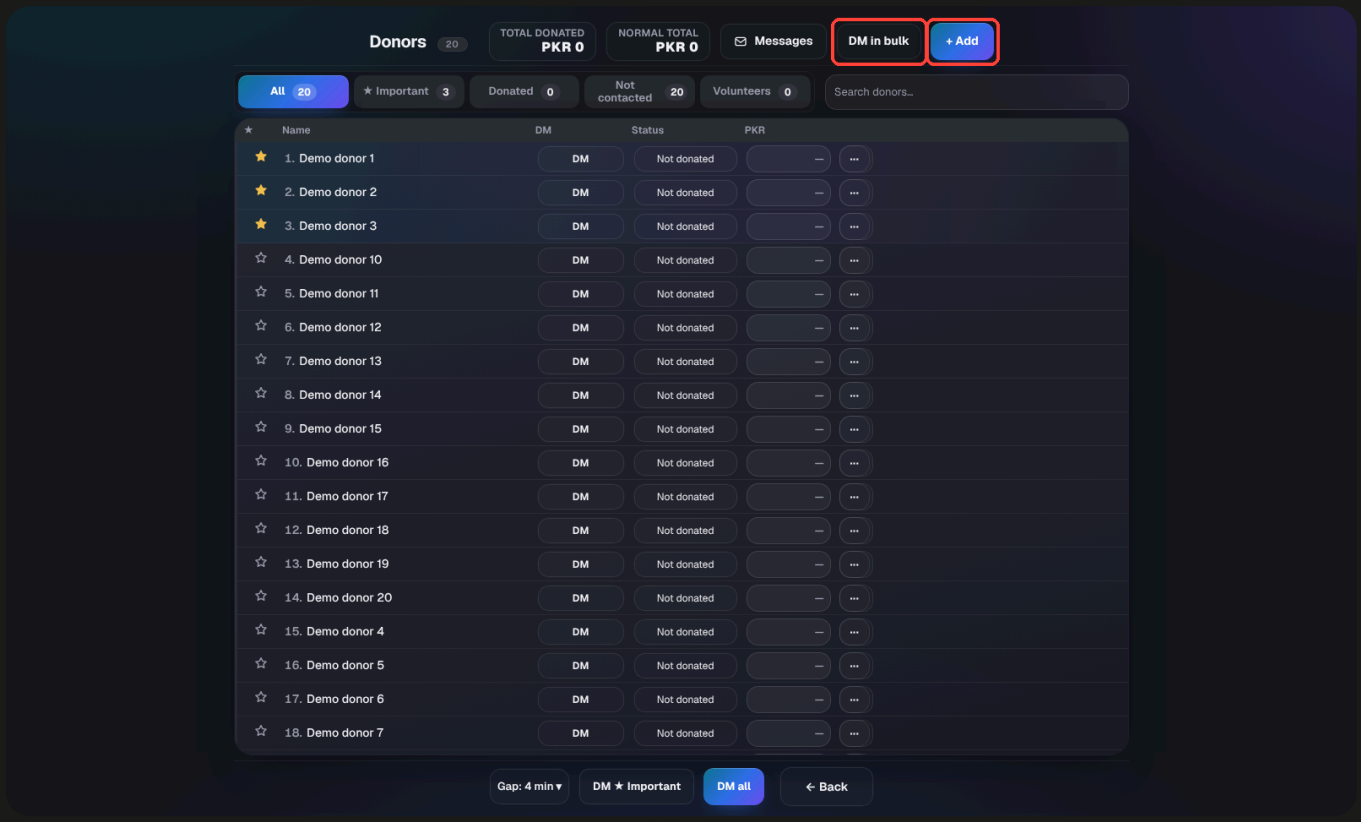

A donor row with its ··· menu open.

CONTROL	WHAT IT DOES
DM	Sends the saved DM caption and poster to this one donor, right now.
Status (Not donated / Donated ✓)	Tap to mark whether they've given. This is your own bookkeeping — it doesn't change the amount left on its own.
PKR	The amount this donor gave, if you want to record it.
···	Opens **Rename** (change their saved name), **Usually donates** (an amount used in their personalised message — leave it empty to send the normal shared message), and **Delete donor**.

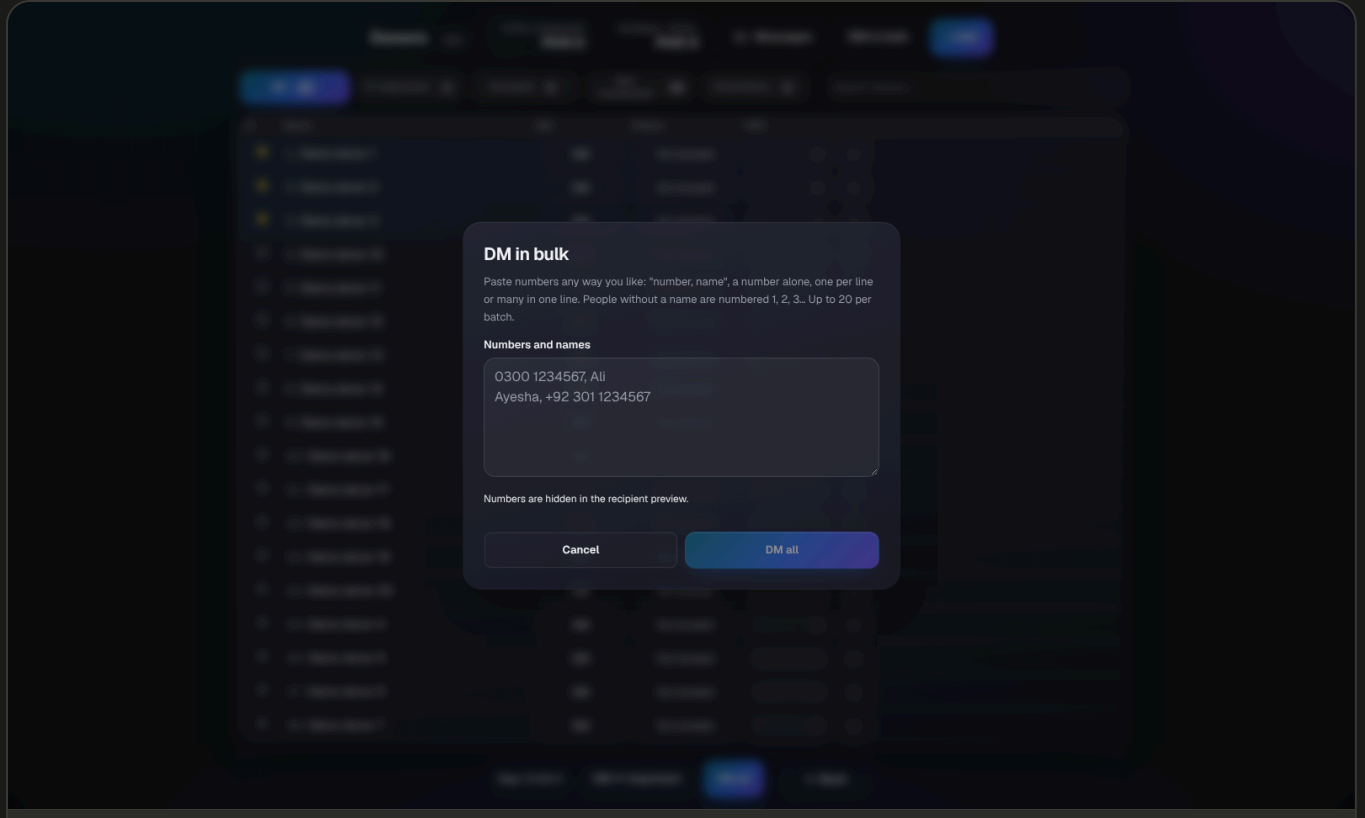

No phone number saved? The DM button becomes **Add #** — tap it, enter their number once, and DMs work normally after that.

09 Sending to many donors at once

At the bottom of the Donors screen: **Gap: 4 min ▾** **DM ★ Important** **DM all**. These send to the whole Important list or the whole directory, one by one, waiting the chosen number of minutes between each person — so it reads as real conversation, not a blast. People already DMed are skipped automatically unless you ask again.

DM in bulk, at the top of the screen, is for people who aren't saved as donors yet — paste numbers (with or without names) and it sends to all of them.

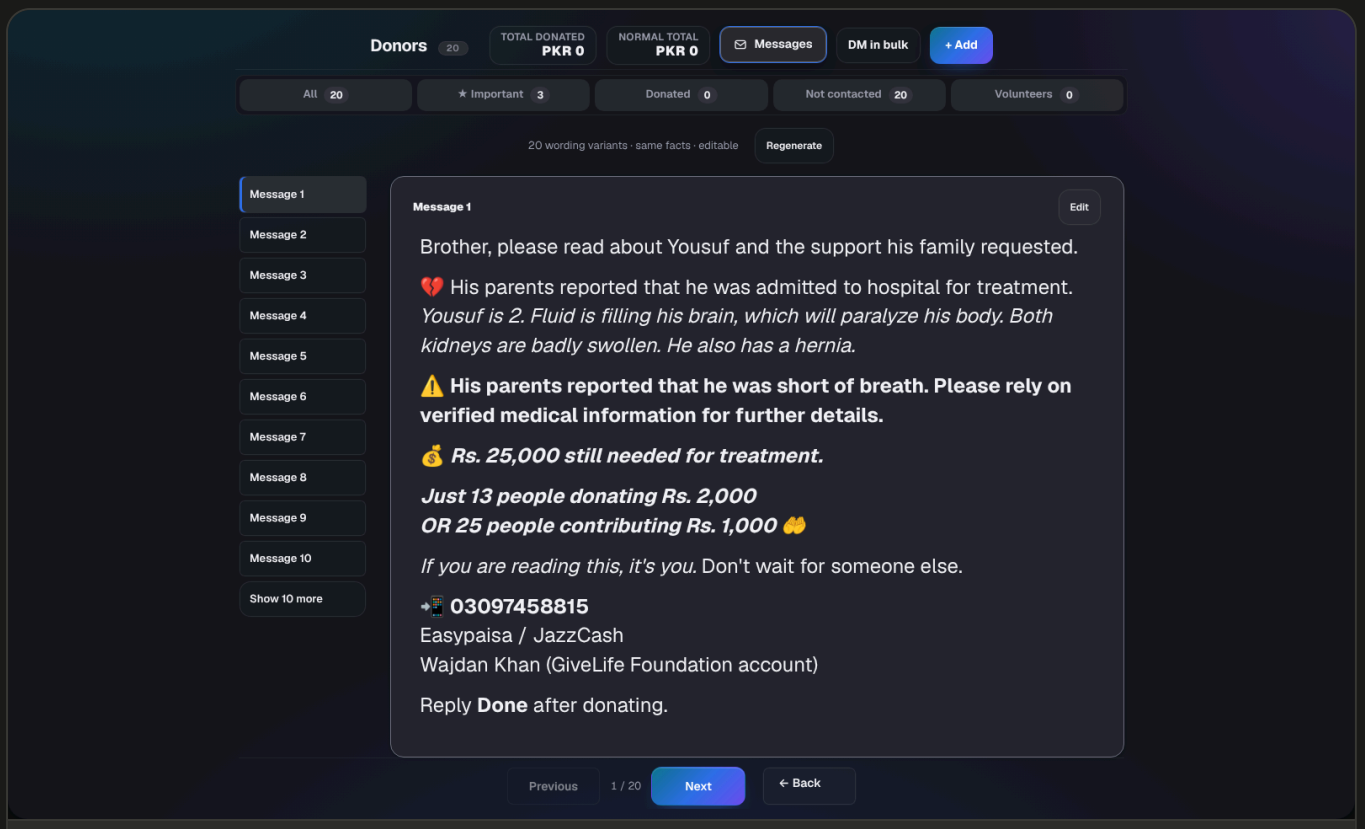

Paste one number per line, or several per line — names are optional. Up to 20 per batch.

A batch keeps going on its own — once started it continues to the next person automatically, even if you close the app. You can stop it any time by typing "stop" to the assistant, or from the progress bar shown on the Donors screen.

10 The Messages library

Tap **Messages** at the top of the Donors screen. This is where several written versions of a DM caption live side by side — useful when you've asked the assistant for a few versions of the same message, or want to flip through what's been sent before picking one.

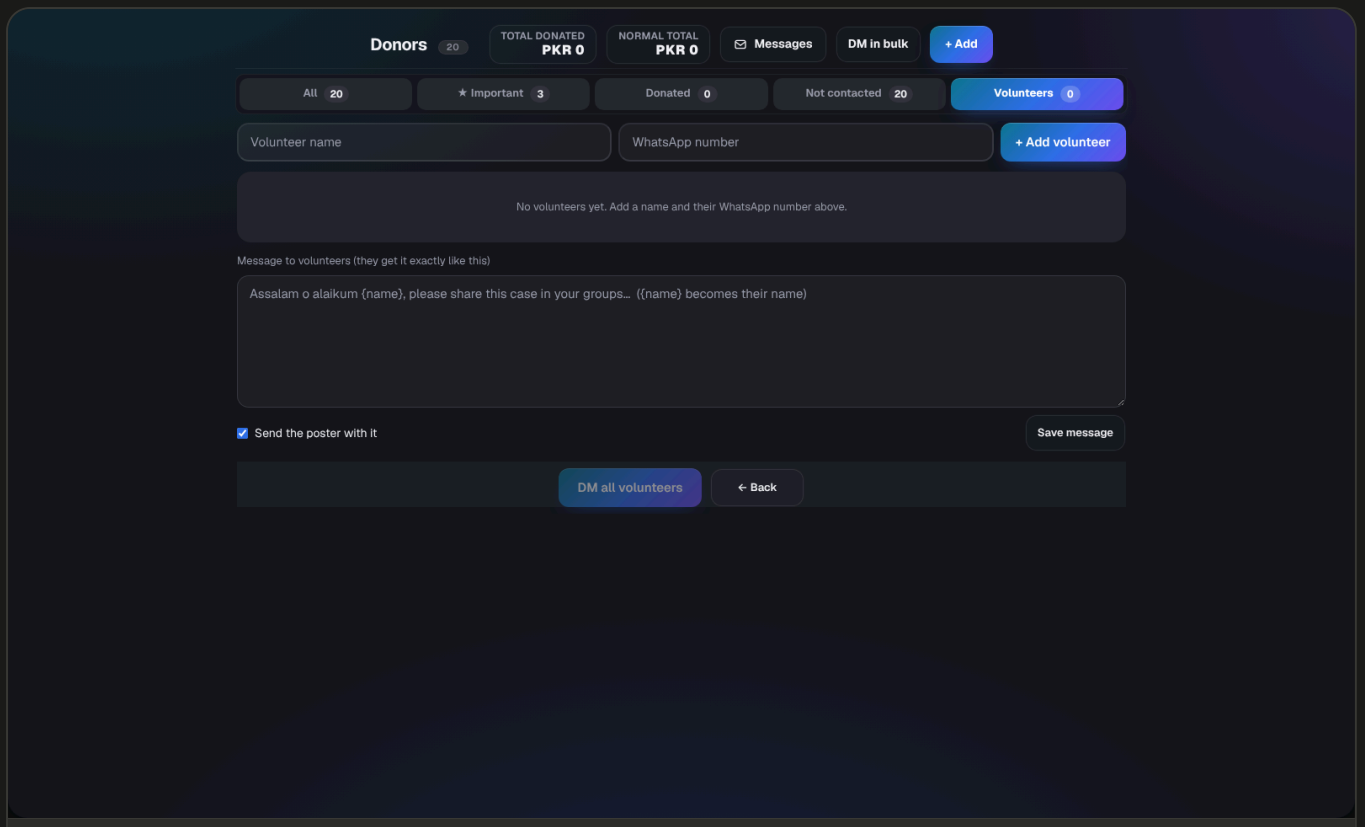

The saved message library: one card per version, with Previous / Next to page through them.

Each card can be edited and saved in place. **Regenerate** asks the app to write a fresh set from scratch if the list is ever empty or you want to start over.

11 Volunteers

Tap the **Volunteers** tab inside Donors. This is a separate, short list for people who help spread the case — not donors themselves, but people asked to share it further.

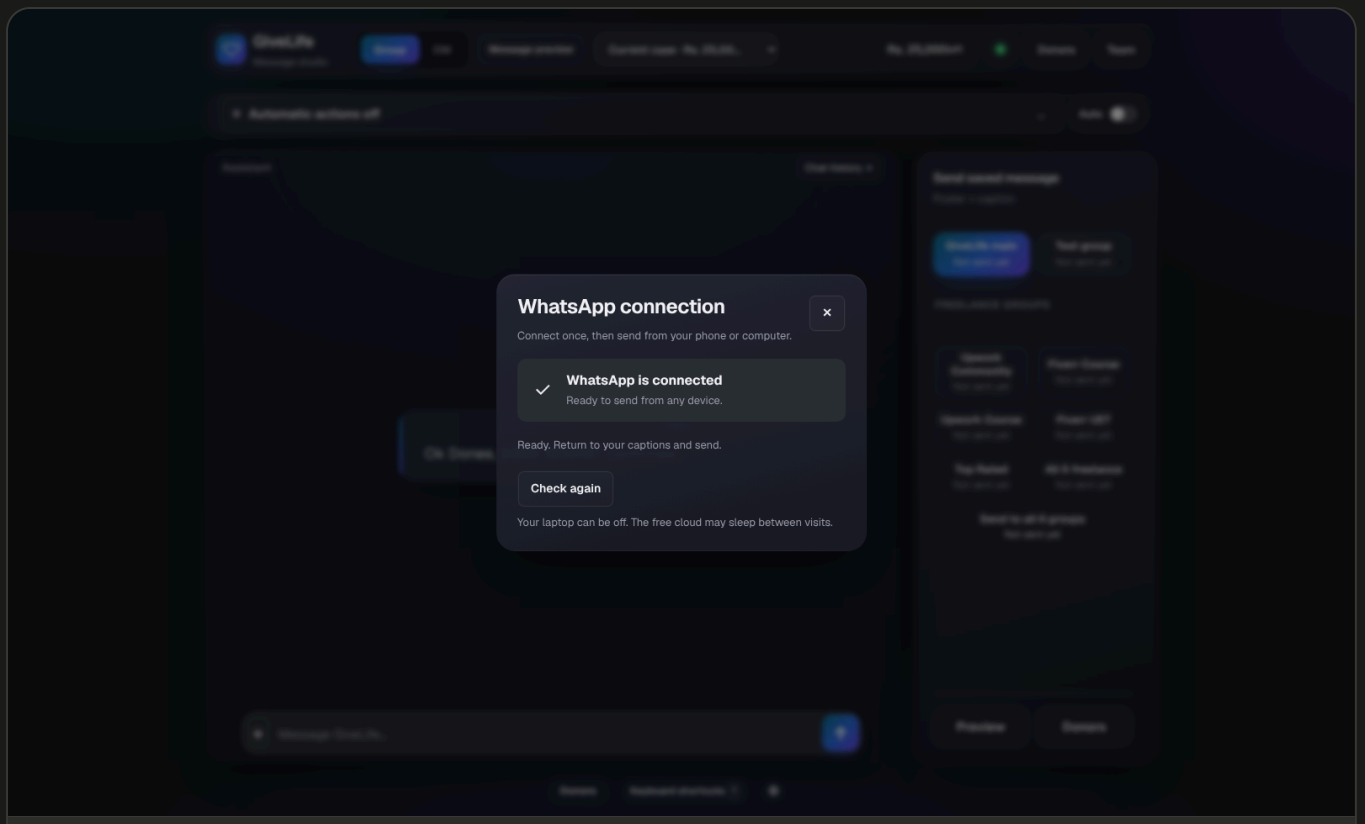

Each volunteer gets one saved message, sent with their first name filled in automatically.

Add a volunteer with their name and number, write one message (use `{name}` anywhere you want their first name inserted), then send it to one volunteer or to everyone on the list.

12 WhatsApp connection & the poster

Tap the connection dot in the top bar to open this screen at any time.

Connected and ready — nothing to do. Reconnecting after a disconnect takes one tap.

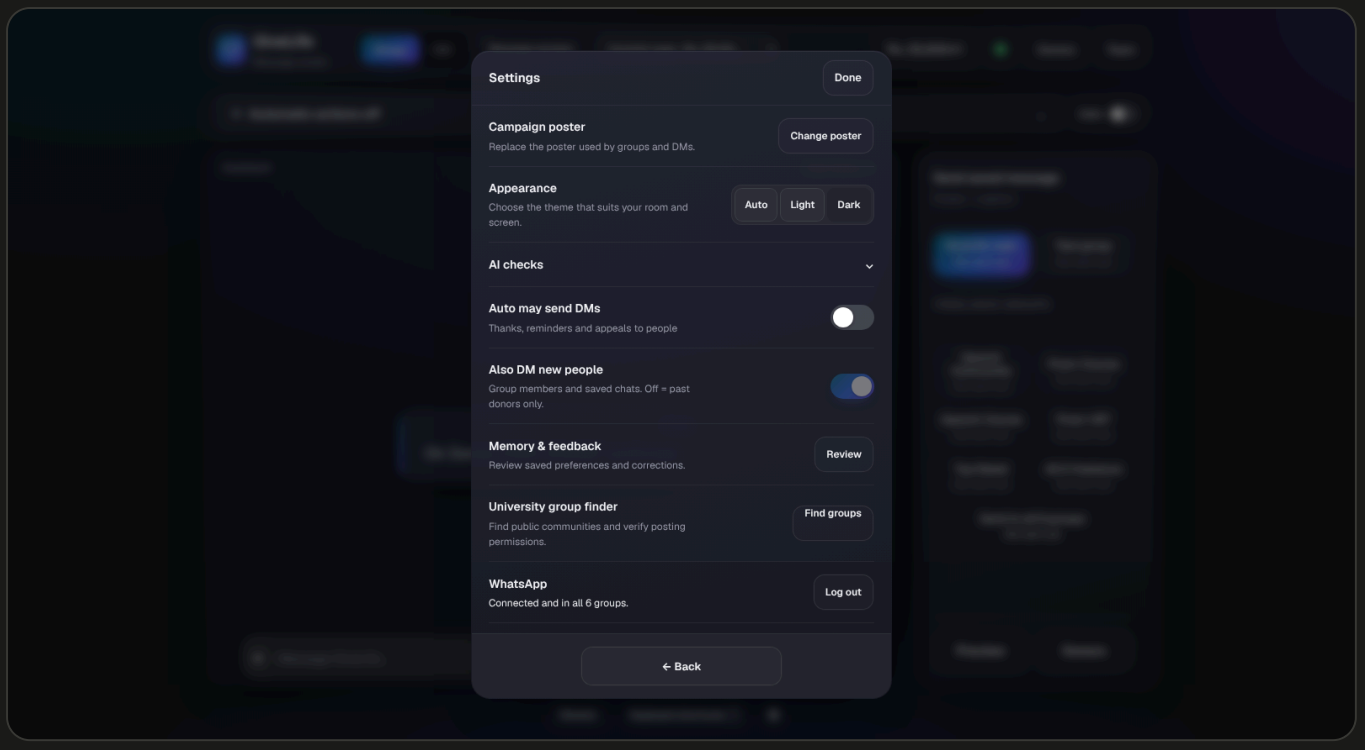

- **Connected** (green dot): everything can send. No action needed.
- **Needs reconnecting**: tap **Reconnect** to restore the saved connection without scanning anything again.
- **Never connected on this account**: tap to get a QR code, then scan it from WhatsApp on your phone (Linked devices → Link a device) — the same way you'd link WhatsApp Web.

The free hosting can sleep when nobody has used the app for a while — a message sent right then may be slightly delayed while it wakes up, not lost.

The poster — the image attached to every group post and DM — is changed from **Settings → Campaign poster → Change poster** (Section 13). Whatever image is set there goes out with every send until it's changed again.

13 Settings worth knowing

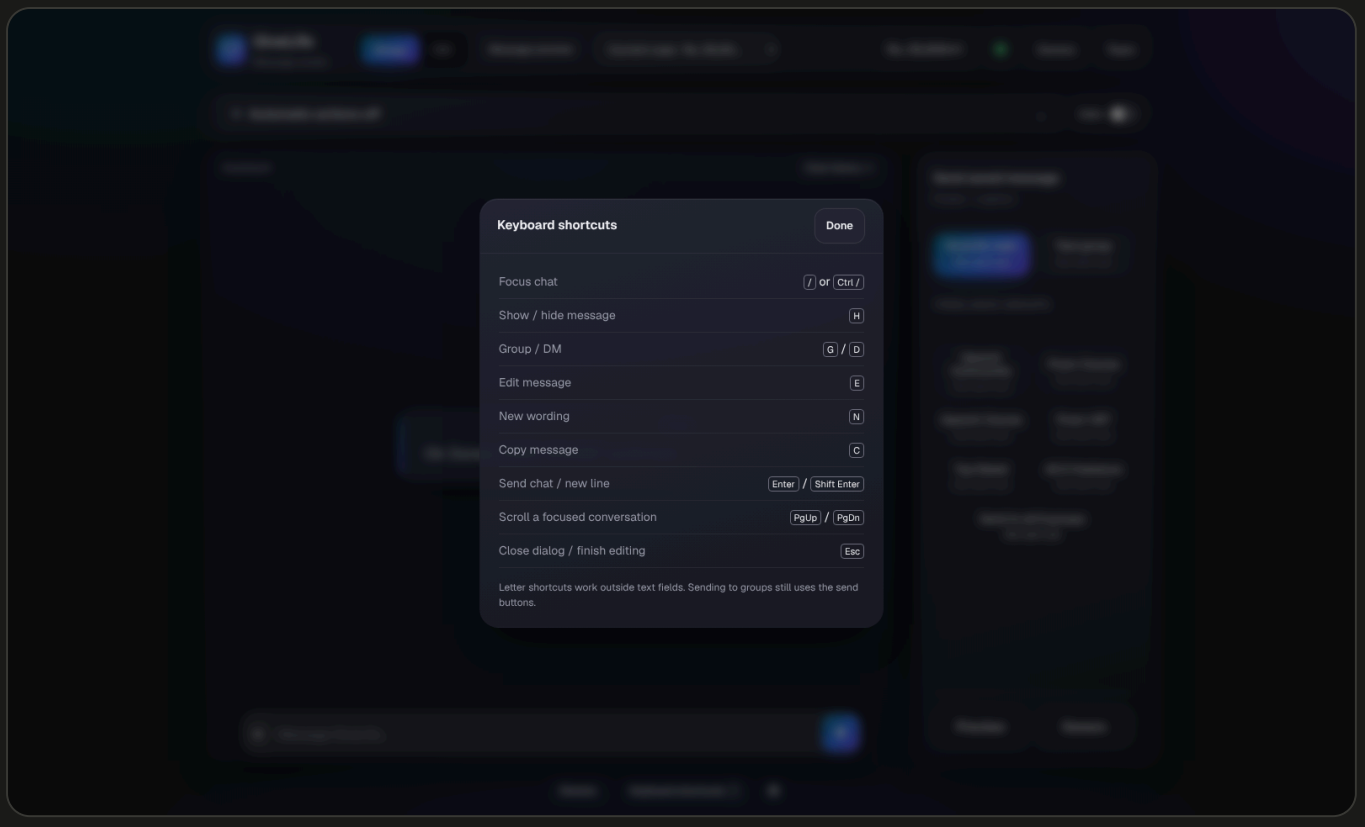

Tap the gear icon (bottom corner on desktop, bottom row on phone) to open Settings.

SETTING	WHAT IT'S FOR
Campaign poster	Replace the image sent with every group post and DM.
Appearance	Light, dark, or match the device automatically.
AI model / Chat checks	Confirms the chat assistant is connected and working; shows which model is answering right now.
Auto may send DMs	Lets Auto mode send thank-you, reminder and appeal DMs on its own, not just group posts.
Also DM new people	When on, Auto DMs group members and saved chats too, not only past donors.
Memory & feedback	Review what the assistant has remembered about how you like things done, and any corrections you've given it.
University group finder	Looks for public student/community groups worth posting to, and checks posting is allowed before you join.
WhatsApp → Log out	Disconnects this WhatsApp number from the studio. Use this only if you need to link a different number.

14 Keyboard shortcuts

On desktop, these work anywhere outside a text box — handy when you're sending often.

Letter shortcuts are disabled while typing in the chat box or an edited caption, so they never interfere with what you're writing.

15 The golden rules

1. Always send a fresh message

Before a repeat send to the same group, tap **New** or ask the assistant for new wording. The exact same caption, sent over and over, is the single biggest reason people stop reading. This is the same rule the earlier team guide led with — it still matters most.

2. A sent WhatsApp message cannot be unsent

Read the caption before you tap a group or Send DM — especially the amount and the payment number. There is a Delete option for the app's own last message, but it only works if WhatsApp lets it, and only briefly after sending.

3. Marking "Donated" is bookkeeping, not the amount left

Ticking a donor as Donated does not by itself reduce "Rs. … left". Update the amount separately — by tapping the Rs. chip or telling the assistant, e.g. "came 2000" — once the donation is confirmed.

4. If you're not sure, ask the assistant before sending

Typing a plain question — "what's left on this case?", "who haven't I messaged yet?" — never sends anything by itself. Use it to check before you act.

5. Hold stops everything, immediately

If something looks wrong — wrong WhatsApp number connected, a mistake about to go out — type `hold everything`. All sending stops until you say resume. It's always safe to use this first and sort out the details after.

16 Quick reference

One page to keep open while you work.

To send the case message

Message preview → check the text → tap a group name (or Send to all N groups). For one person: switch to DM → fill in number → Send DM with poster.

To write a fresh version

Tap **New**, or tap **Edit** and change it yourself, or just tell the assistant what to change.

To update money

Tap the **Rs. … left** chip, or type it: `25k left`, `came 2000`.

To message many donors

Donors → ★ Important or All tab → **DM ★ Important** / **DM all** at the bottom. For people not yet saved: **DM in bulk** at the top.

To stop everything, right now

Type `hold everything` to the assistant.

To let it run itself

Turn **Auto** on in the bar under the top row. Turn it off to stop automatic posting.

Before every send: is this the message I want sent, to the right place, with the right amount?
